Energy-Aware Task Offloading in Fog-Cloud-IoT Ecosystem Using Reinforcement Learning

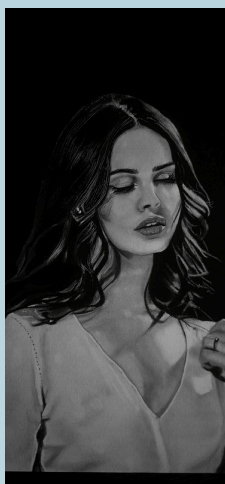

M. Renukitha, J. Div. D. Suryaprabha, A. Div. T. Chithra, S. A. Div. S. S. Sankar, S. Sankar, S. Sankar, S. Sankar

Abstract:
The paper presents a novel approach for task offloading in a fog-cloud-IoT ecosystem. The proposed approach is based on a reinforcement learning (RL) framework. The RL agent learns to offload tasks to fog nodes or the cloud based on the current state of the system, which includes the number of tasks, the energy level of the fog nodes, and the delay of the tasks. The RL agent is trained using a simulated environment. The results show that the proposed approach achieves a higher energy efficiency and a lower delay compared to the existing approaches.

2. INTRODUCTION

Dr. D. Suryaprabha, Assistant Professor, Department of Information Technology, has successfully published a research paper in a Scopus-indexed journal entitled as "Energy-Aware Task Offloading in a Fog-Cloud-IoT Ecosystem Using Reinforcement Learning."
